Kuehr, J., Frischer, T., Karmaus, W., Meinert, R., Barth, R., Herrman-Kunz, E., Forster, J., and Urbanek, R., "Early Childhood Risk Factors for Sensitization at School Age," Journal of Allergy and Clinical Immunology 90: 358-363, 1992.

Cross-sectional data of a longitudinal study in Southwest Germany were used by the authors of this study to evaluate early childhood risk factors for current sensitization in 1470 children aged 6-8 years. The authors reported odds ratios for unilateral parental atopy (1.9), bilateral parental atopy (2.8), low gestational age (1.9), and male gender (1.6). The authors reported that "breast feeding, maternal smoking habits after the child's birth, prior exposure to pets, and social class are not important."
